The hassle free way to keep you, your business & your family safe & secure

The system is fully wireless with a variety of wireless devices that are made to protect your business and home in any circumstance.

When you have an alarm installed, you want the process to run **smoothly** and with as **little disruption** as possible, so why not choose our wireless system?

The lack of wires will make installation **simple** and **quick** compared to the time it will take to have a burglar alarm with wires and cables installed.

There will be **no need to remove carpets** or **lift floorboards** with the installation of our wireless system, making the process **hassle free** and leaving you to **carry on with your life as normal**, but with the added **advantage** of a **thoroughly protected home**.

Battery monitoring/saving

Each wireless device is monitored so you are informed when to replace a battery before its life has expired. Furthermore, each device conserves battery power by "sleeping" during periods when detection is not needed.

Methods of arming/disarming

There are three different types of arming/disarming methods: A pin code may be entered on the keypad, a prox tag may be presented at a keypad or prox reader, or a keyfob may be pressed.

User friendly programming

Whether you need to change codes, add tags, add keyfobs, check the logs, change time/date or walk test your system, each function can be easily located with the user-friendly menu-driven programming.

Intelligent Arming

This feature involves automatically recognising home and away modes. For example it operates by recognising if you have walked out of the exit door for an 'away' arm, or remain inside the house for a 'home' arm.
